**Concerning section V:**

Document US-B-6 223 079 (hereinafter D1) is considered closest prior art in that it relates to a system which monitors congestive heart failure (CHF) by sensing impedance of the heart across any combination of the four heart chambers and determining impedance differences over time and comparing such differences to predetermined criteria (cf. D1, col.10, lines 10-52). D1 thus discloses the features as of the preamble of claim 1.

Claim 1 is distinguished over the prior art in that a quotient between the impedance maximum and minimum values during a cardiac cycle is determined and analysed to detect CHF. As these features are not known in the present context and by representing an alternative to the analysing methods known from the available prior art, claim 1 is considered to meet the requirements of Art.33 PCT.

Claims 2-17 likewise meet the requirements of Art.33 PCT in that these claims are dependent on claim 1.
